Hackathon

IoT Unit – Master IA4OneHealth

2021-2022

Game rules

- Two teams of 7 members compete on an project

- Each team has to develop an innovative connected solution until it is ready

- Each team will present its solution on 27 January 2022

- This test corresponds to the final test of the course unit

Health innovation project

- Creating a connected solution to monitor the elderly to identify **and** predict the onset of disease

- The solution should provide objective and comprehensive data about patients which can easily be understood by physicians

Security and data management

- Security and data management have to be integrated into the project

→ imagine an IoT platform capable of managing, storing and processing massive data influxes, all in a controlled and regulated environment

Teams

Team A	Team B
Clotide Braye	Luis Rocholl
Jorge Acosta	Abdelgader Abdelmuhsen
Jorge Al Zoghby	Farah Benayad
Daria Butorina	Laura Arocas
Ana Marin Estan	Omaima Jarraya
Moritz Schillinger	Ali Mrouech
Melissa Youssef	Blanca Rodrigo Lacave

Presentation

- Januray 27th 1 pm (UTC)

- By team

- 30 minutes

- Presentation support
